1. In the video, we used a query function to see how spread out the values in the "Sale Amount" field are. What function did we use?

- ◉ Standard Deviation
- ○ Count
- ○ Average
- ○ Maximum Value

✓ **Correct**
The Standard Deviation function helps us see how far out our values are in a certain numeric column.

2. _____ helps you assess if the size of a workload is slowing down the system.

- ◉ Monitoring the amount of data being processed through a data pipeline
- ○ Database Monitoring
- ○ Job-level Runtime Monitoring
- ○ Monitoring the performance of queries

✓ **Correct**
Monitoring the quantum of data being processed in a data pipeline at a time helps you assess if the size of the workload is slowing down the system.
